

Trained logistic model's decision boundary, projected onto the best-separating pair per correlation band (others at median)

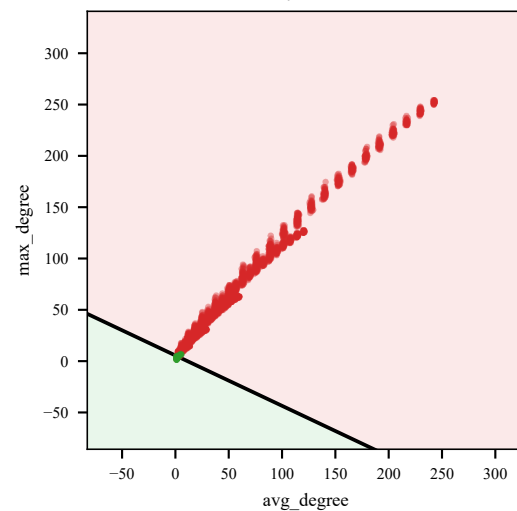

Erdős-Rényi

structured

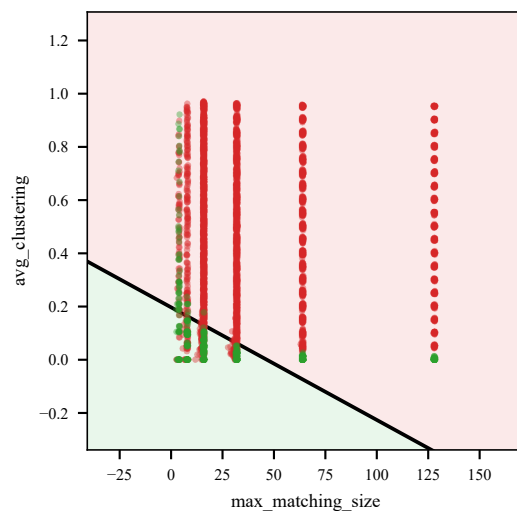

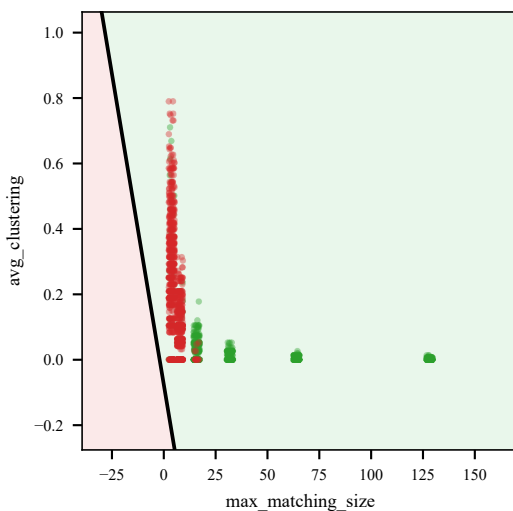

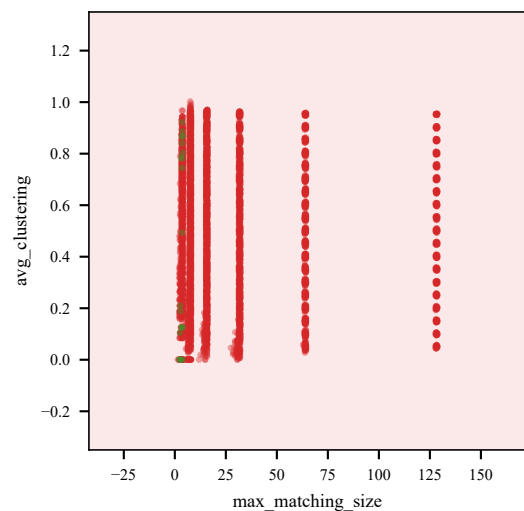

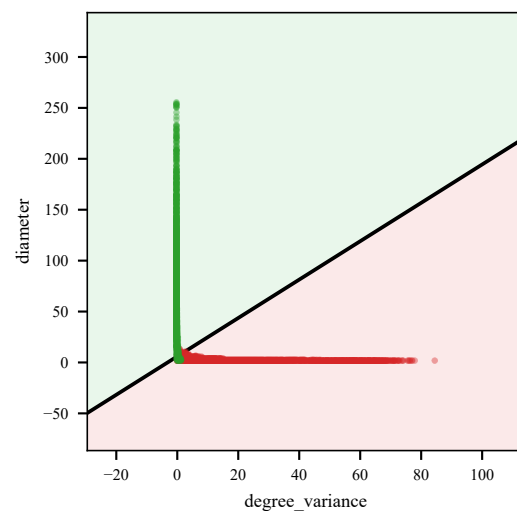

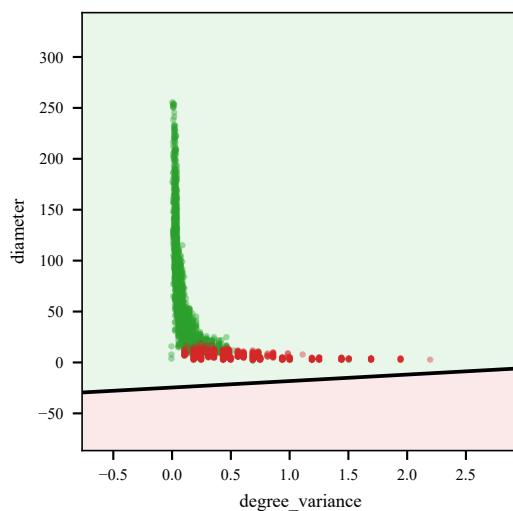

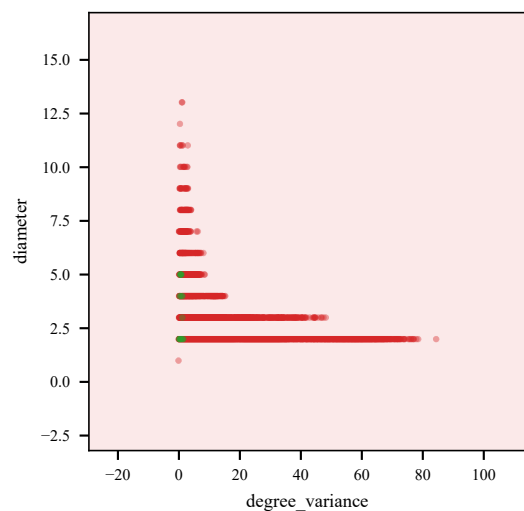

hybrid

correlated ($r=+0.99$)

anti-correlated ($r=-0.49$)

uncorrelated ($r=+0.00$)

● matching wins ($\Delta_{CX} > 0$) ● Pauli wins ($\Delta_{CX} < 0$) — $\Delta_{CX} = 0$ boundary
